EXAM ASSISTANT

The app for web programming exams and practice at home. It checks your computer, records that you accepted the rules, tests your solution and packs it into the ZIP you submit. You write the code in VS Code.

HOW IT WORKS

1. **Set up** — Install Node.js and VS Code — Page 2
2. **Extract & start** — Unzip the whole package, open the app — Page 2
3. **Sign in** — Name, Neptun code, sign the rules — Page 3
4. **Code** — Edit the Starter files in VS Code — Page 3
5. **Test** — Run the checks, fix, repeat — Page 3
6. **Submit** — Create the ZIP and upload it — Page 4

THE MAIN WINDOW

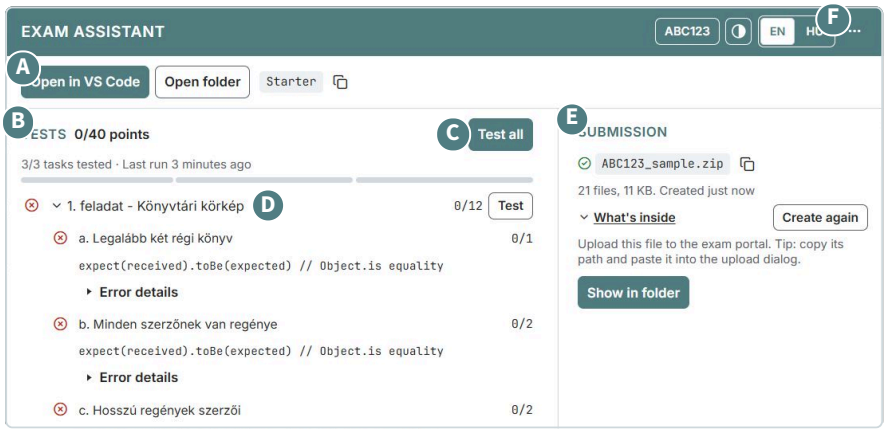

FIG. 1 The main window after signing in.

- **A Open in VS Code** — Your Starter files, ready to edit.
- **B Tests** — Your local score.
- **C Test all** — Or Test next to one task.
- **D Task feedback** — Click a task to see each check.
- **E Submission** — Create and check your ZIP.
- **F More options (…)** — Programs, diagnostics, reset.

WHAT YOU NEED

- A computer with **Windows 11**, **macOS 13** or newer, or **Debian Linux 12/13** (64-bit)
- **Node.js** (LTS version): runs the tests
- **Visual Studio Code**: where you write code
- **Chrome**, **Edge** or **Chromium**, or let the app download a test browser
- **Internet** for the first start (the app may download a test browser, about 100 MB)
- The **exam package** (a ZIP) from your instructor

PRACTICE AT HOME

Your own computer and the sample package. Go through the whole flow, then open the ZIP and look inside. Your instructor tells you if practice work is uploaded anywhere.

AT THE EXAM

A lab computer. The rules you sign apply: work alone, no communication, no AI tools, only the materials the invigilators allow. Upload the ZIP to the exam portal before time ends.

SET UP YOUR COMPUTER

Do this once, at home, before your first practice. Follow only the card for your system.

WINDOWS

Windows 11, 64-bit (x64)

01. INSTALL

1. **Node.js** LTS, **Windows Installer (.msi)**: nodejs.org/en/download
2. **VS Code** for **Windows**: code.visualstudio.com/download

02. EXTRACT AND START

1. Right-click **sample-windows-x64.zip** › **Extract All...**
2. Open the extracted folder and double-click **ExamAssistant.exe**.

IF IT WON'T START

Warning about an unrecognized app: **More info** › **Run anyway**, only for your instructor's package.
Nothing opens: install the WebView2 Runtime, then try again.

MACOS

macOS 13 or newer, Intel or Apple silicon

01. INSTALL

1. **Node.js** LTS, **macOS Installer (.pkg)**: nodejs.org/en/download
2. **VS Code** for **Mac**, then drag it into **Applications**: code.visualstudio.com/download

02. EXTRACT AND START

1. Double-click **sample-macos-universal.zip**. Finder extracts it next to the ZIP.
2. Open the folder and double-click **ExamAssistant**.

IF IT WON'T START

"Can't be opened": **System Settings › Privacy & Security › Open Anyway** (Apple's guide).
"macOS started a temporary copy": drag the app to the Desktop and back into the exam folder, then reopen it.

LINUX

Debian 12 or 13, 64-bit (x64). Other distributions are not tested.

01. INSTALL

1. **Node.js** LTS for **Linux**: follow the steps on nodejs.org/en/download
2. **VS Code .deb**, then **sudo apt install ./code_*.deb**: code.visualstudio.com/download

02. EXTRACT AND START

1. Right-click **sample-linux-x64.zip** › **Extract Here**.
2. Open a terminal in the extracted folder and run:

```
sudo apt install libwebkit2gtk-4.1-0 libgtk-3-0
chmod u+x ./ExamAssistant
./ExamAssistant
```

Lines 1–2 are needed once; next time, run **./ExamAssistant** only.
"Permission denied": run the **chmod** line again. Library error: run the **apt** line again.

KEEP THE FOLDER TOGETHER

- **ExamAssistant** the app (.exe on Windows, .app on macOS)
- **Starter/** your files and README-EN.md
- **RULES-EN.md**, **RULES-HU.md** the rules you sign
- **.assistant/** tester and settings (may be hidden)

- ⊗ Don't start the app from inside the ZIP.
- ⊗ Don't move the app out of this folder on its own.
- ✓ Extract to a folder you can write to.

SIGN IN, CODE, TEST

The same on every system. Screenshots are from Windows and show a made-up student.

03. ENTER YOUR DETAILS AND SIGN THE RULES

1. Check **YOUR COMPUTER** at the top: a green tick means Node.js, a browser or VS Code was found.
2. Choose **EN** (top right) for English.
3. Type your **full name** and **Neptun code** (6 characters).
4. Choose **Read the rules** and read them.
5. Check your name, then choose **Accept and sign**. Your signature goes into your ZIP.

FIG. 2 Check the name, then sign.

04. OPEN YOUR FILES AND WRITE YOUR SOLUTION

1. Choose **Open in VS Code** (or **Open folder**).
2. Read **README-EN.md** in Starter: it explains the tasks.
3. Solve **task-1**, **task-2** and **task-3** (40 points). Keep your work in Starter.

FIG. 3 Open your files from here.

05. TEST YOUR SOLUTION AND READ THE FEEDBACK

1. Save in VS Code: **Ctrl+S** (macOS: **Cmd+S**). Tests only see saved files.
2. Choose **Test all**, or **Test** next to one task. The first test may wait until setup finishes.
3. Click a task to open its checks. Open **Error details** to see why a check failed.
4. Fix the code, save and test again.

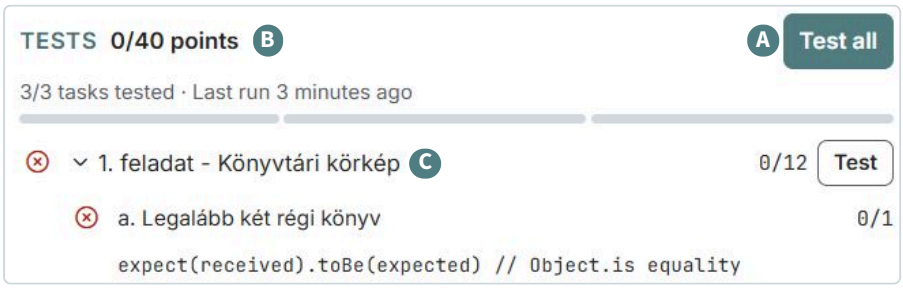

FIG. 4 The untouched starter: every check fails (0/40). Sample task names are Hungarian.

- **A** **Test all** Runs every task.
- **B** **Score** Points earned / available.
- **C** **A task** Click to open its checks.

Passed all points · **Partial** some points
Failed no points · **Not run** not tested yet
changed: result from before your last edit

Local tests are feedback, not your grade. Official grading also uses hidden datasets. A failing starter is normal.

SUBMIT YOUR WORK

Create the ZIP when you finish, and again after every later change. Failed tests never block the ZIP.

06. CREATE AND CHECK YOUR SUBMISSION ZIP

1. Save all your files.
2. Choose **Create submission ZIP** under **SUBMISSION**.
3. Files unchanged? The app asks first: choose **Create anyway** or **Cancel**.
4. Check the file name (**ABC123_sample.zip**: your Neptun code and the exam), the number of files and **What's inside**.
5. Choose **Show in folder**. The ZIP is in the exam folder, next to the app.
6. Changed something later? Choose **Create again**.

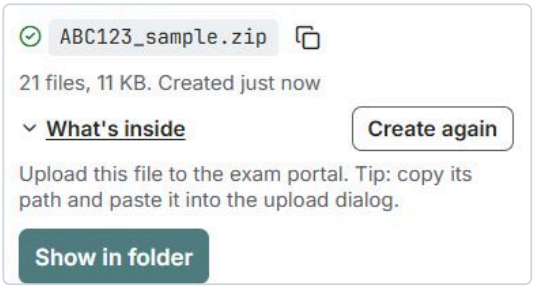

FIG. 5 A created ZIP, ready to check.

At the exam: upload the ZIP to the exam portal before time ends. The copy button next to the file name copies its path, so you can paste it into the upload dialog.

IF SOMETHING GOES WRONG

YOU SEE	WHAT TO DO
"Extract the ZIP first"	Close it. Extract the whole package, then start the app from that folder.
"The app must stay in the exam folder"	Move the app back next to the Starter folder and start it again.
"macOS started a temporary copy"	Drag the app to the Desktop, then back next to Starter. Start it again.
"Exam Assistant is already open"	Switch to the other window (taskbar on Windows, Dock on macOS).
"The exam folder is damaged"	Get a fresh copy of the package from your instructor.
"Node.js is not installed" or "too old"	Install the LTS version (page 2), then choose **Try again**.
An installed program is "not found"	Open **More options (...) › Programs...** and choose the program's file.
Tester or test browser setup fails	Check your internet connection, then choose **Retry tester setup**.
Anything else	Open **More options (...) › Copy diagnostics** and send it to your instructor.

BEFORE YOU FINISH

- ☑ All files saved
- ☑ ZIP created after your last change
- ☑ What's inside checked
- ☑ At the exam: ZIP uploaded in time
